# Jayden Chen

617-794-6230 | chen.jayd@northeastern.edu | linkedin.com/in/jayden-chen-542a43386 | github.com/jaydenseepdeprived

**Boston, MA | Available for CO-OP Jan - June 2027**

## Education

**Northeastern University** Boston, MA

*Bachelors in Computer Science & Design at Khoury School of Computer Sciences* *Expected May 2029*

- **Related Coursework**: Computer Systems, OOP, Programming C++, Creative Fabrication, Interactive Design
- **Northeastern Wireless Club**: Participated in amateur radio activities weekly, including parks on the air, contests, and casual communication, gaining over 200+ contacts (100+ confirmed), across all continents and 60+ countries
- **Huntington Hackers, B40 Boston**: Organized as sole leader for a hacker "hang out" centered around open source software, right to privacy, and gnu/linux operating systems

## Certifications

USACO Silver (2023), Amateur Radio License (2026)

## Technical Skills

**Software Tools**: GNU/Linux, Bash, Arch, NixOS, Vim, Emacs, Git
**Programming Languages**: Rust, C++/C, Python, Markdown, Tex, Assembly x86, Go, Java, HTML/CSS, Lua
**Embedded**: ESP32, Raspberry Pi, RISC V, Arduino
**Fabrication Tools**: Soldering, 3d Printer, Resin Printer, Vinyl Cutter, Laser Cutter, CNC Machine, Bandsaw
**AI Tools**: Cursor, Claude Code, Ollama, RAG Models, Unsloth, Pytorch
**Design Software**: Fusion 360, Cavalry, GIMP (script), Inkscape, Illustrator, InDesign, Godot, Blender, Rhinoceres, Dreamweaver, Premiere Pro, Unity3d, Photoshop, Adobe Suite, Figma

## Experience

**Embedded Software Intern** Mar 2025 – Aug 2025

*Shanghai Moocxing Technology Co., Ltd* *Shanghai, China*

- Gained embedded systems experience testing and developing on custom RISC-V chips
- Managed multiple tasks per week to help debug and program device drivers and other software

**Penetration Testing Intern** Jul 2024 – Aug 2024

*Information & Data Security Solutions Co., Ltd* *Shanghai, China*

- Studied at a web-security company learning valuable skills in cybersecurity and software security practices
- Researched and scanned for web vulnerabilities using an array of tools like Burpsuite, Nmap, Sqlmap, and more

## Projects

**Buidling Nodes for Local Mesh Nets** | *ESP32, LoRA, Meshtastic, Meshcore, Reticulum* Jan 2026 – Current

- Contributed to local, decentralized mesh net infrastructure through building hardware, contributing to open source software, and educating people on the potientals and impact of such technology
- Designed handheld devices using ESP32 microchips paired with fabrication tools like 3d printing and soldering

**Making Music Synthesizers with Recycled Materials** | *Soldering, Circuits, 3d Printing* Aug 2026 – Current

- Sourced parts from disposable electronics and old technology such as electronic vape pens
- Hacked electronics to create musical synth instruments

**Computational Art Inspired by Cellular Automata** | *Rust* July 2026 – Oct 2026

- Programmed a terminal clicker-game inspired by cellular automata and conway's game of life with rust
- Experimented with algorithms that control color, shape, and frame time to create unique visuals

**Distance Detection Program** | *Python, ROS2, OpenCV, Mediapipe* Sep 2022 – Mar 2024

- Researched and developed weekly on a distance detection and object recognition system for airport trolleys
- Developed a regression model to determine the distance and general location of any object using two web cameras and OpenCV to run on real IoT hardware. Resulting in an approved patent (number: CN221678736U)
